

General Planning

Dec 15th, 2024

Items:

- GitLabs repo organization
 - “Single thread”
 - Versioning with Git Tags
 - v3.1.0
 - Version requirements & conventions
 - Admin settings
 - Enable/disable features
 - “Multi thread”
 - Custom builds for specific customers & use cases
 - Divergent branches vs Multiple repositories
- Virtual help desk
 - Feature requirements
 - v1.0.0
 - .t1u downloads & instructions
 - Contact form
 - Cloud hosting vs in-house hosting
 - Projected traffic
 - Hardware requirements
 - Cost
 - Recurring
 - Cybersecurity
 - Availability (Uptime)
 - Power outages
 - Maintenance
 - Load speed
 - Static content
 - v2.0.0
 - Support Ticketing
 - Feature requests
 - Public board
 - Upvoting
 - User accounts
 - Portal
 - Custom software (“multi-thread” repo)
 - Functionality?
- Long term vision?
 - Scale
 - Timeline
 - Upcoming use cases & features
 - Drone?

- Other products
- Upcoming WebGUI Changes (v3.2.0)
 - Architecture
 - Minimize # of websocket messages
 - Major events:

Websocket Events

Client Side:

```
startMission // "Generate and begin the mission defined on my payload"
pauseMission // "Interrupt the current mission"
stopMission // "Cancel the current mission"
```

Server Side:

```
systemStatus // "Here is a snapshot of our system"
```

- Features
 - Express backend vs UIBackend
 - User authentication
 - User types & permissions
 - Admin
 - Add/Remove users
 - Change passwords
 -
 - User
 - Replace php functionality
 - Cyber security enhancement
 - Paradigms & methodology
 - Roles of express server vs backendUI (if both exist)
 - "Pass through" vs "Server-side logic"
 - Hardware considerations
 - Separate repo?
 - How to startup server
 - Production
 - Development
 - Simulator?
 - Show current software version in settings page
 - Listen to uploaded files
 - Visualization
 - Display mission progress

- Current task indicator
 - Text-to-speech file creation
 - Client-side?
 - Multi unit support
 - Statistics & dashboard
 - View & download logs
- Known Bugs
 - Required to be on-page after mission finishes generating
 - Large logs causes crashing
 - Very large missions can crash when generating? (Unconfirmed)
- Documentation
 - Communication protocol document
 - High level Paradigms & Architecture document
 - Startup instructions
 - In-line Comments
 - “Why” vs “What”
- Technical Debt & Refactoring
 - Rushed settings page
 - Some backend communication happening outside of middleware
 - Use of PHP scripts
 - Cybersecurity risks
 - Http vs https
