

(Bare bones) Instructions for adding Div Tags to your Canvas page

In Canvas, click on the "Edit this Page" button. Click on the "Switch Views" on the upper right.

The div id creates divided areas within an HTML page. You can read more about them here: http://www.w3schools.com/tags/tag_div.asp (a great resource for HTML tags)

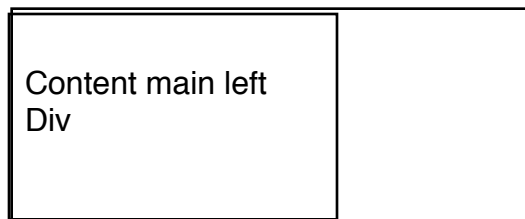

```
<div id="content-main" style="width: 100 %; clear: both; border: none; padding: 15px;">
```

This creates an initial division in the page that spans across the entire page, no border.

```
<div id="content-main-left" style="float: left; width: 60%;">
```

Creates a division within the division, 60% across the page, like this:

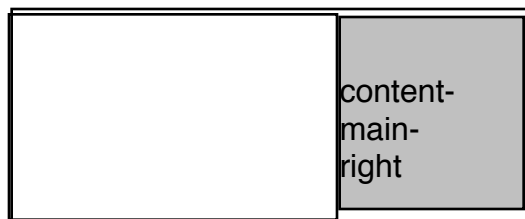

Content for left hand side goes here.....

Div tags must be closed / closes the tag

```
</div>
```

```
<div id="content-main-right" style="float: right; width: 35%; margin: 1%;">
```

```
<div style="background-color: #eee; padding: 5px;"><span style="font-size: large;">
```

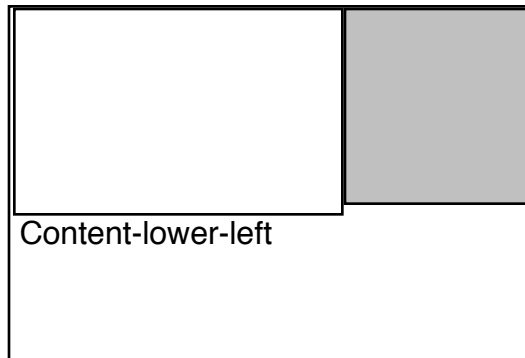

Content on the right goes here....The background is gray (background-color:#eee)
</div>

```
<div id="content-lower-left" style="float: left; width: 90%;">
```

```
<div style="float: left; width: 90%;">
```

A div to put your content below back to left-justified.

```
</div>
```

Clicking on the Switch Views will allow you to edit these areas on your own.

Copying and pasting the code in the attached text file into your Canvas course should produce Divs in your course. Do not hesitate to contact us if you need help.
