JPMorgan Chase & Co.
575 Washington Boulevard
Jersey City, NJ 07310

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer II position at JPMorgan Chase, as advertised. With a strong foundation in full-stack development and a specialization in React, I am excited about the opportunity to contribute to the Corporate & Investment Bank - Embedded Finance and Hosted Solutions team.

In my recent role as a Technical Product Manager at SERVO, I led the integration of multiple Shopify apps, improving platform functionality and user experience. This experience honed my skills in agile development methodologies and software solution design, aligning closely with the responsibilities of the Software Engineer II role.

My background in developing innovative software solutions, as demonstrated through projects like DashDoor and Home Keeper, has equipped me with a deep understanding of front-end technologies and a commitment to writing clean, maintainable code. I am particularly adept at React, JavaScript, and TypeScript, and have experience with the entire Software Development Life Cycle, including testing with tools like Jest and Git.

Joining JPMorgan Chase represents an exciting opportunity for me to apply my technical skills in a challenging and innovative environment. I am particularly drawn to the firm's commitment to technology and its application in finance, and I am eager to contribute to a team that values diversity, equity, inclusion, and respect.

Thank you for considering my application. I am looking forward to the opportunity to discuss how my skills and experiences align with the needs of your team.

Sincerely,

Spencer Heywood
