

Rajesh Babu Galla

Java Tech Lead

Ph: (210) 900-8887

LinkedIn: <https://www.linkedin.com/in/rajesh-g-436289267/>

Email: rajesh.g.pilani@gmail.com

PROFESSIONAL SUMMARY:

- **Certified Oracle Java programmer** with **10+** years of experience in developing back-end web applications with strong focus on Quarkus and Spring Boot frameworks. **SDLC** which includes requirement analysis, design, development, testing, deployment using methodologies such as **Waterfall** and **Agile** models.
- Responsible for end-end delivery of projects and handling 3 backend developers
- Experience in **Core Java, J2EE, JSP, Servlets, JDBC, Spring Framework, Quarkus, Spring Boot, Maven, Hibernate, Restful Web Services, SOAP.**
- Expert in Various Agile methodologies like SCRUM, Test Driven Development (TTD), Incremental and Iteration methodology, Agile Development & Testing using Software Development Life Cycle.
- Extensive experience in designing professional UI web applications using front-end technologies like **Angular 4/6/7/8,13, Node.js, Angular JS, HTML5, CSS3, JavaScript, jQuery AJAX, JSON** and Bootstrap.
- Strong hands-on experience with various modules of Spring Framework such as **Spring MVC, IOC, AOP, JDBC, IO, Spring Rest, Spring Boot 1.X/2.x, Spring Microservices, Spring REST, Spring Security, Spring JPA, Spring Web, Spring Web Flux.**
- Proficient in applying design patterns like **MVC, Singleton, Session Facade, Service Locator, Visitor, Observer, Decorator, Front Controller, Data Access Object.**
- Experience in Service Oriented Architecture (SOA), Web Services Integrations, BPM, BPEL and ESB using WebSphere Process Server, ESB, Web Sphere Integration Developer, Data Power and WSRR.
- Proficient in frameworks like **Struts, Spring, JSF, AJAX frameworks** and **ORM** frameworks like **Hibernate.**
- Expertise in working with various Amazon Web Services (AWS) like Elastic Container Service (ECS) & Elastic Compute Cloud (EC2), Simple Storage Service (S3), Lambda implementation, AWS CLI.
- Experience in working with Java script libraries like **Angular JS, JQuery, Node JS, Lodash Js, underscore JS, BackboneJS, ExtJS.**
- Experienced in **SOA** architecture in building both **SOAP and Restful** web services (Both producing & consuming of SOA services).
- Experienced in Middleware persistence frameworks like **Hibernate/JPA** Entities for mapping Java classes using Hibernate Query Language (**HQL**), HSQL Named Queries, Criteria, Projections.
- Responsible for support and maintenance, implemented **Spring Batch** for huge number of transactions.
- Expertise in **Azure Scalability** and **Azure Availability** - Build VMs availability sets using the Azure portal to provide resiliency for IaaS based solution to manage network traffic.
- Expertise in **XML** technologies such as **XSL, XSLT, XML schemas, XPath, XForms, XSL-FO** and parsers like **SAX, DOM.**
- Strong experience with NoSQL database **MongoDB** development and migrations from **SQL** relational databases to **MongoDB, Cassandra** and **CouchDB.**
- Experience in using **Active MQ, Rabbit MQ** to implement messaging and queuing system.
- Experience in database modeling, design and development of PL/SQL queries, Stored Procedures, Triggers, Cursors, Functions and Packages in relational databases: Oracle 11g, SQL Server 2005/2008, DB2 and MySQL.
- Experience in working with web servers like **Tomcat 8, IBM WebSphere8.0, Jetty, JBoss 7.1.0** and **WebLogic 10.0, Nginx.**

- Experience in cloud platform technologies such as **AWS Web Services, Heroku, OpenShift, Cloud Foundry**
- Hands on experience with build tools like **Ant, Maven, Gradle** and Logging tools like **Log4J** and **Splunk**.
- Experience in testing with **JUnit** Framework using **Mockito** and **Easy Mock, Spring Junit Runner, JMeter**.
- Expertise in several testing environments like **JUnit, Selenium, CURL, Jenkins, SoapUI** and **System Testing**.
- Mastering/Leading in the development of applications/tools using **Python**.
- Good knowledge on configuration management and build tools like **Bit Bucket, CVS** and **GIT**.
- Highly proficient with **Vue.js** framework and its core principles such as components, reactivity, and the virtual DOM.
- Hands-on experience on **CICD** pipelines with DEV ops technologies like **Jenkins, Sonar, Cloud Foundry** and **Docker**.
- Involved in building and deploying Apache **Ant/ Maven/Gradle** scripts for deployment and customizing WAR/ JAR file management for web applications.
- Hands on experience using **Selenium** and **Cucumber** for creating Automated Test Suites and deriving functional and acceptance tests.
- Expertise with employment of **Spring Kafka** and **Zookeeper** apart from **JMS** as messaging service.

TECHNICAL SKILLS:

Languages/Utilities	Java, PL/SQL, XML and UML.
JAVA Technologies	Core Java, Multithreading, JDBC, JNDI, Java beans, J2EE, Junit, Maven, Mockito, Ant, Log4j.
Frame Works	Spring 4.x, Spring Boot, Quarkus, Spring Batch Struts 2.0/1.x, JSF and Hibernate, Spring Data JPA, RX Java.
Design Patterns	JSTL, Singleton, MVC, Business Delegate, DAO, DTO, Session Façade.
Web Services	SOAP & REST.
Web Technologies	Applets, JSP, HTML5/4, CSS3, JavaScript, JSON, AJAX and jQuery, Angular 13, React JS
Databases	MYSQL, Oracle, SQL server, MongoDB.
Middleware	Servlets, Java Beans, RMI, EJB, JMS.
IDEs and Tools	Eclipse, IntelliJ IDEA, Maven, Gradle, UML, Log4j.
Version Control Tools	Subversion, GitHub.
Web/Application Servers	Apache Tomcat, IBM WebSphere, JBoss.
Methodologies	Waterfall, Agile.
Operating Systems	Windows 7/8/XP, Linux, UNIX, BAT, scripting.
Cloud Technologies	AWS Cloud Components S3, EC2, Lambda, Elastic Beanstalk, ECS, RDS.

EDUCATION DETAILS:

Bachelors at BITS-Pilani in M.Sc.(Tech.) Information Systems 2010-14

PROFESSIONAL EXPERIENCE:

Client: Southwest Airlines, Remote, NYC

Jan 2023 - Present

Designation: Tech Lead

Description: Part of customer notifications team. Involved in sending push, email, sms and voice notifications to customers at various stages like when ticket is booked, after baggage check, when there is change in status of flight like gate change

Roles & Responsibilities:

- Lead a team of 3 backend developers, providing guidance, mentoring, and technical expertise to ensure the successful completion of projects.
- Oversee the end-to-end delivery of projects, from requirement analysis and design to development, testing, and deployment.
- Collaborate with cross-functional teams to define project objectives and ensure alignment with business goals.
- Proficient in Apache Spark programming using languages such as Scala
- In-depth knowledge of Spark's core concepts, including Resilient Distributed Datasets (RDDs), DataFrames, and Spark SQL.
- Implement Agile methodologies to optimize project management and maintain project timelines.
- Involved in various phases of **Software Development Life Cycle (SDLC)** of the application like requirement gathering, Design, Analysis and Code development.
- Worked in **Agile framework** as an individual contributor Responsibilities include - Interaction with Business team in story grooming, reviewing story/acceptance criteria.
- Used **Java8** features like Streams and Lambda expressions and Maintained Interface compatibility and concurrency in the project using Java 8 new features like default, static methods and Concurrency API.
- Used Java 8 Method References feature to point to methods by their names.
- Developed scalable and high-performance APIs using Quarkus and Spring Boot frameworks.
- Used **Microservice** architecture with **Spring Boot** based services interacting through a combination of REST and **Apache Kafka** message brokers and worked with Kafka Cluster using Zookeeper.
- Closely worked with **Kafka Admin** team to set up **Kafka cluster** setup on the QA and Production environments.
- Converted a **Monolithic app** to **Microservices Architecture** using **Spring Boot 2.0** using 12-factor app methodology. Deployed, Scaled, Configured, wrote manifest file for various Microservices in Open shift/Kubernetes environment.
- Generated Metrics with method level granularity and Persistence using Spring AOP and Spring Actuator.
- Used **REST** and **SOAP Web Services** to acquire credit history information.
- Involved in consuming RESTful web services using **Angular 13** to render **JSON** data.
- Wrapper developed in **Python** for instantiating multi-threaded application and running with other applications.
- Developed a microservices-based application using Quarkus and deployed it on Kubernetes. Conducted performance testing and optimized API endpoints for scalability.
- Stored config data on **Redis** to serve as distributed cache
- Developed batch processing applications using spring batch deployed on AWS.
- Worked on **AWS** Elastic Load Balancing, created EC2 instances and worked on autoscaling the instances.
- Used **CFT templates** for creating **AWS stack, S3 buckets**, Roles and Policies.
- Worked on CHEF scripts for automation and bootstrapping of applications on **EC2 instances**.
- Rewrite existing applications and migrated applications and the to the **AWS cloud** as part of modernization project.

- Integrated Order Management System with third-party logistics providers, optimizing the shipping process and reducing delivery lead times, resulting in improved customer satisfaction and increased repeat business.
- Developed automated inventory synchronization functionality, reducing stock-outs and ensuring accurate product availability information across multiple sales channels, resulting in higher sales conversion rates.
- Collaborated with cross-functional teams to customize Order Management System modules, aligning system functionalities with specific business requirements, and enabling seamless integration with existing enterprise systems.
- Designed and documented **CI/CD** tools configuration management.
- Deployed services to **GCP** using App Engine, google storage, big table
- Experience with various MVC Java frameworks like Angular 8, Node.JS, Bootstrap etc. Responsible for developing the partner Homepages using HTML5, CSS3, JavaScript, Typescript, React JS, Node JS and jQuery.
- Developed and deployed microservices-based applications using Quarkus, achieving faster startup times and reduced memory footprint by leveraging ahead-of-time (AOT) compilation and GraalVM.
- Developed crypto rest services using **NodeJS** and integrated services.
- Led the migration of legacy Order Management System to a modern cloud-based solution, resulting in improved scalability, system reliability, and reduced maintenance costs.
- Developed web applications running on NodeJS using the Express framework, **Vue.js** and Backbone.js with Mustache.js for front end MVC/templating.
- Developed dynamic responsive Web Application by integrating Angular 13 with Bootstrap which is further integrated with Web Services and **Vue.js**.
- Developed user interface by using the **React JS, Flux** for SPA development.
- Worked in using **React JS** components, Forms, Events, Keys, Router, Animations and Flux concepts.
- Implemented the function to send and receive AMQP messages on **RabbitMQ** synchronously and asynchronously and send **JMS** message to Apache ActiveMQ on the edge device.
- Used **GIT** as source code collaborator and GitHub for maintaining code and documentation.
- Migrated the Application from **Spring MVC to Spring Boot**.
- Experience in developing scalable solutions using **NoSQL databases CASSANDRA, MongoDB, DynamoDB**.
- Proficient in provisioning and managing virtual machines (VMs) on Google Compute Engine.
- Configured GCE instances for optimal performance and scalability.
- Experience with creating custom machine images and using snapshots for backups.
- Skilled in creating and configuring Kubernetes clusters for orchestration.
- Experience with container scaling, load balancing, and automated deployments in Google Kubernetes Engine.
- Proficient in building and deploying web applications on the serverless App Engine platform.
- Strong knowledge of Google Cloud Pub/Sub for building event-driven systems.
- Experience in message publishing, subscribing, and topic management.
- Skilled in using BigQuery for data warehousing, analytics, and querying large datasets.
- Proficient in modeling data entities and performing queries in Datastore.
- Skilled in creating serverless functions for Firebase applications.
- Experience in integrating Firebase with GCP services.
- Used **NOSQL** database Mongo DB to store data of reporting Application which is of unstructured data.
- Involved in capacity planning and requirements gathering for multi data center **Cassandra** cluster
- Used **MongoDB** document-oriented database to store data.
- Implement a production ready, load balanced, available and fault tolerant **Kubernetes** infrastructure.
- Worked with containerization tools, can implement transition to Docker and develop distributed cloud system using Kubernetes and Helm package manager for **Kubernetes**.
- Migrate Data from **Elasticsearch-1.4.3** Cluster to **Elasticsearch-5.6.4** using Logstash, Kafka for all environments.

- **Elasticsearch** and Logstash performance and configuration tuning.
- Developed and deployed **UI layer** using **JSP, XML, JavaScript, HTML5**, Ajax, jQuery, **React JS** and CSS3.
- Used **Spring Framework** for **DI/IOC** and **ORM** components to support the **Hibernate** tool.
- Used **Spring DAO** for developing the data access layer.
- Integrated **Hibernate 4.1** along with **Spring Data Redis** and used annotations for mapping ORM classes to **DB**.
- Developed Hibernate mapping file and the HQL queries for retrieving data from the Oracle database.
- Involved in Configuring **web.xml** and **Spring-config.xml** according to the **Spring** framework.
- Developed application based on the **MVC Architecture** using **Spring MVC** to define Dispatcher Servlet, Controller, model and View Resolver.
- Used **Core Java** classes to implement business logic.
- Responsible for installation, configuration, and administration of **Red Hat Linux, Solaris** systems.
- Experience with **Jumpstart & Kickstart** Installations on **Solaris & Linux**
- Responsible for configuring, integrating, and maintaining all Development, QA, Staging and Production **PostgreSQL** databases within the organization.
- Used **Maven** to build war and ear files to deploy on JBoss Application Server 7.
- Monitored and fixed the error logs using **Log4J**, configured log4j.xml.
- Followed Test Driven Development (**TDD**) and wrote server-side test cases using **JUnit 4.12**.
- Implemented agile development process on Software Development Life Cycle.
- Participated in Docker and AWS workshops to gain experience with the emerging technologies.
- Actively participated in the daily **SCRUM** meetings to produce quality deliverables within time.
- Implemented containerization of Quarkus applications using Docker, enabling seamless deployment and scalability in Kubernetes environments.
- Closely worked with Kafka Admin team to set up Kafka cluster setup on QA and Production environments.
- Used Kafka as a message service for service-to-service asynchronous communication.
- Worked with Kafka Cluster using Zookeeper for configuration and coordination.
- Developed Kafka consumers and producers for real-time data streaming.
- Proficient in writing scripts for data manipulation, analysis, and automation tasks.
- Used Python APIs for data processing, extraction, and transformation.
- Developed backend services and scripts for handling business logic and automation tasks.
- Experience with Python frameworks like Flask and Django for web development.
- Utilized Kafka Connect for integrating Kafka with external data sources and sinks.
- Implemented REST Microservices using Spring Boot with Kafka for event-driven architectures.
- Led the conversion of a monolithic app to a Microservices Architecture using Spring Boot 2.0.
- Developed scalable and high-performance APIs using Quarkus and Spring Boot frameworks.
- Implemented a Microservices-based application using Quarkus and deployed it on Kubernetes.
- Conducted performance testing and optimized API endpoints for scalability in a Microservices environment.
- Utilized Microservices architecture with Spring Boot services interacting through REST and Apache Kafka message brokers.
- Worked closely with the Kafka Admin team to set up Kafka cluster setup on QA and Production environments to facilitate Microservices communication.
- Developed REST Microservices using Spring Boot with Kafka for event-driven architectures.
- Converted a monolithic app to Microservices Architecture using Spring Boot 2.0 following 12-factor app methodology.
- Deployed, scaled, configured, and wrote manifest files for various Microservices in OpenShift/Kubernetes environment.

Environment: Java 1.8, Java 11, MySQL, Redis, Elastic Search, Quarkus, Spring Boot, Spring MVC 3.2, Hibernate 4.1, Web services – SOAP & Restful, GCP, WSDL, Oracle 11g, Maven, JBoss 7, EJB 3.0, JMS, XML,

SVN, Log4J, IntelliJ, Eclipse 4.0, HTML5, Java script, AJAX, jQuery, React JS, JUnit 4.12, Agile Methodology, SCRUM.

Client: Zeta, Bangalore, Remote

May 2021 - Dec 2022

Designation: Senior Backend Java Developer

Description: Zeta is a Unicorn modern banking tech SAAS startup

Roles & Responsibilities:

- Involved in analyzing a request, **design, development**, unit testing and **implementation**.
- Participated in requirement gathering and designed application using UML. Elaborated on the Use Cases based on business requirements and was responsible for creation of **Class Diagrams, Sequence, Collaboration and Activity Diagrams**.
- Responsibilities included development of new modules of the application such as Web using **J2EE technologies and Spring Framework**.
- Implemented service layer using **Spring IOC** and annotations and Controllers using Spring MVC.
- Implemented **DAOs**, entities using Hibernate API and Hibernate QL.
- All the functionality is implemented using Spring IO / Spring Boot and Hibernate ORM. Implemented Java EE components using Spring MVC, Spring IOC, spring transactions and **spring security** modules.
- Developed **Hibernate mapping file** and the **HQL queries** and **Criteria API** for retrieving data from databases.
- Created automated pipelines in AWS pipeline to deploy **Docker** containers in AWS **ECS** using services like **CloudFormation, CodeBuild, CodeDeploy, S3** and **puppet**.
- Built S3 buckets and managed policies for **S3** buckets and used S3 bucket and Glacier for **storage** and **backup** on AWS.
- Configured **AWS Multi Factor Authentication** in **IAM** to implement 2 step authentication of user's access using Google Authenticator and AWS Virtual MFA.
- Development of **Python** APIs to dump the array structures in the Processor at the failure point for debugging.
- Integrated Quarkus applications with cloud services, such as AWS Lambda, Azure Functions, and Google Cloud Pub/Sub, to leverage serverless and event-driven architectures.
- Worked with the team to develop **POJO's** using **spring framework** for **dependency injection** and integrating it with **Hibernate and Spring Data JPA**.
- Extensively worked on N-Tier architecture systems with application system development using **Java8, J2EE, JSP, Servlets, Struts, JMS, EJB, JDBC and Multithreading**.
- Developed Session Bean/Entity Beans for MPI.
- Responsible for creating efficient design and developing User Interaction screens using HTML, CSS3, **Bootstrap**, JavaScript, **Angular 6** and **Node JS**.
- Developed unit tests and integration tests using JUnit and Mockito to ensure code quality, reliability, and proper functionality of Quarkus applications.
- Enhanced application performance by **Angular 8** Component based development in view of future Angular framework transitions.
- Created documentation for all the components which is included in **React-Bootstrap** page.
- With the concept of **React JS** Worked on usage metrics and also end to end events tracing for analysis purpose.
- Building **Linux servers (web-logic application, apache, DB servers etc)** in large quantity as per EDC and Non-EDC production requirement as well as App/Dev requirement.
- Coordinated hardware/software installations and upgrades to ensure proper **Unix** system performance.
- Served as the lead **PowerShell** developer in hundreds of Windows based migration and automation projects.
- Installed and maintained **Unix** security patches on the development systems.
- Engineered and implemented fully automated end-user, data migration solution to eliminate business downtime during acquisition/merger using **Windows PowerShell**.

- Created **PowerShell** scripts to constantly monitor the health of the Exchange messaging infrastructure and notify my teammates or myself in the event of a problem.
- Developed DAO layer exposing access to **MongoDB**.
- Proficient in building and deploying web applications on the serverless **App Engine** platform.
- Worked with containerization tools, can implement transition to Docker and develop distributed cloud system using Kubernetes and Helm package manager for **Kubernetes**.
- Design, build and manage the ELK (**Elasticsearch**, Logstash, and Kibana) cluster for centralized logging and search functionalities for the App.
- Developed AWS CloudFormation templates for infrastructure as code (IaC) deployments.
- Worked with AWS Elastic Load Balancer (ELB) for distributing incoming application traffic.
- Configured and managed AWS RDS (Relational Database Service) instances.
- Utilized AWS CloudWatch for monitoring and logging in AWS environments.
- Experience with AWS CloudTrail for tracking user activity and API usage.
- Proficient in using AWS ElastiCache () for caching and improving application performance.
- Worked with AWS IAM (Identity and Access Management) for access control.
- Deployed applications on AWS EC2 instances and managed security groups.
- Implemented CI/CD using Jenkins jobs and Bitbucket hooks to deploy code to AWS EC2.
- Mastering/Leading in the development of applications/tools using Python.
- Extensive experience in backend development using Python.
- Developed and maintained Automated Salt scripts for Elasticsearch.

Environment: Java 1.8,, MySQL, Elastic Search, Spring Boot, Spring MVC 3.2, Hibernate 4.1, Web services – SOAP & Restful, GCP, WSDL, Maven, EJB 3.0, JMS, XML, SVN, Log4J, IntelliJ, Eclipse 4.0, HTML5

Client:Healofy, Bangalore

(May 2019-May 2021)

Designation: Senior Backend Java Developer

Description: Healofy started as a Q&A platform for women and then gradually became a social network platform and then an e-commerce platform.

- Written and Maintained Automated Salt scripts for **Elasticsearch**.
- Excellent Knowledge of **Cassandra** Architecture, Cassandra data modeling & Monitoring Cassandra using OpsCenter.
- Can handle commissioning and decommissioning nodes along with monitoring of **Cassandra** Cluster.
- Have Knowledge on Apache Spark with **Cassandra**.
- Closely worked with **Kafka Admin team** to set up **Kafka** cluster setup on the QA and Production environments.
- Used Spring **Kafka** API calls to process the messages smoothly on Kafka Cluster setup.
- Used **AJAX, JSON** to send request to the server to check the functionality of the websites and for storing and exchanging information between browsers and servers.

Environment: Java 8, MySQL, Redis, J2EE, Spring boot, AWS, GCP, Quarkus, Hibernate, Spring Data JPA, Webservices, PowerShell, WebLogic Portal, JMS, EJB, AJAX, Struts, JSP, Java beans, Web Services, Apache Kafka, WebLogic Application Server, SOAP, XML, JAXP, JNDI, UML, CSS, DHTML, Oracle, Java Script, Cassandra, HTML

Client:Promolta, Bangalore

(May 2018-May 2019)

Designation: Software Engineer 2

Description: Promolta is a video distribution platform.

- Developed User Interface using **Struts, JSP, Java Script, Ajax and JSON**.
- Expertise with web-based GUI architecture and development using **HTML, CSS, DHTML, AJAX, JavaScript XML** and **Tag libraries (JSTL)**.
- Experience in using **Google Cloud Storage** for scalable and secure object storage.
- Proficient in setting up access controls, buckets, and object lifecycle management.
- Skilled in using **Google cloud BigQuery** for data warehousing, analytics, and querying large datasets.
- Proficient in building and deploying web applications on the serverless **App Engine** platform.

- Developed build scripts to generate the EAR file with Maven.
- Developed REST web services using **JAX-RS** API to send data from **Oracle** Database in **JSON** Format
- Developed **soap webservices** using cuff to interact with MPI Services.
- Implemented REST Microservices using spring boot.
- Used **Soap UI** for testing Web Service.
- Used **CVS** tool to maintain version control.

Environment: Java 8, MySQL, Redis, J2EE, Spring boot, AWS, GCP, Quarkus, Hibernate, Spring Data JPA, Webservices, PowerShell, WebLogic Portal, JMS, EJB, AJAX, Struts, JSP, Java beans, Web Services, Apache Kafka, WebLogic Application Server, SOAP, XML, JAXP, JNDI, UML, CSS, DHTML, Oracle, Java Script, Cassandra, HTML

Client- Capital Float, Bangalore, India

September 2015 - April 2018

Designation: Java Developer.

Description: Capital Float is an online platform that provides working capital finance to SMEs in India. It offers flexible, short-term loans that can be used to purchase inventory, service new orders or optimize cash cycles.

Roles & Responsibilities:

- Built backend in Python and frontend in Single page web application (**SPA**) in **Angular** for Field sales app which collects the potential borrower details via eKYC where the borrower can agree to terms and digitally sign the agreement. This app is responsible for disbursing 500 loans a month (**Python, MySQL, AngularJS, Angular material**).
- Integrating Unified Payments Interface to receive EMI from borrower in a hassle-free manner. Exposed APIs in Swagger. Wrote test cases in JUnit, Mockito (**Java, Spring Boot, MySQL**)
- Backend for Pay Later and its complementary products. This app generates \$38M a month revenue (**Java, Spring Boot, MongoDB, Python, web2py**)
- Built messaging server for sending emails/SMS/push notifications which can handle up to 10k messages/sec with minimal latency (**Node.js, RabbitMQ, MySQL**)
- Scraping of potential borrower's data, which is helpful in analyzing and making a loan offer to that business (**Python, Scrapy, Beautiful soup, MySQL**)
- NPS application to get feedback from customers via various platforms, i.e., email, SMS, sales calls. Code is checked into GitHub. APIs can be consumed through JSON or XML (Java, Spring Boot, MySQL).
- Implemented CI CD using **Jenkins** jobs and Bitbucket hooks to deploy code to AWS EC2
- Developed APIs in Spring Boot for Android App called Time Motion to make the sales process more effective. Setup sharded Mongoddb cluster based on User id(Java, Spring Boot, Mongoddb).
- Proficient in provisioning and managing virtual machines (VMs) on **Google Compute Engine**.
- Skilled in configuring GCE instances for optimal performance and scalability.
- Experience with creating custom machine images and using snapshots for backups.
- Expertise in deploying and managing containerized applications using **Google Kubernetes Engine**.
- Skilled in creating and configuring Kubernetes clusters for orchestration.
- Experience with container **scaling, load balancing**, and automated deployments in **Google Kubernetes Engine**.
- Proficient in building and deploying web applications on the serverless **App Engine** platform.
- Experience with **auto-scaling** and managing applications without worrying about infrastructure.
- Skilled in using **BigQuery** for data warehousing, analytics, and querying large datasets.
- Experience in optimizing query performance and creating data visualizations.
- Strong knowledge of **Google Cloud Pub/Sub** for building event-driven systems.
- Experience in message publishing, subscribing, and topic management.
- Experience with **Google Cloud Datastore**, a **NoSQL database** for application data.
- Proficient in modeling data entities and performing queries in **Datastore**.
- Skilled in creating serverless functions for Firebase applications.
- Experience in integrating Firebase with GCP services.

Environment: Java, Python, JavaScript, Spring boot, Web2Py, NodeJS, Postgres, MySQL, Mongoddb, Swagger, Postman, XML, JSON, Bitbucket, Git, Apache tomcat, Jenkins, AWS EC2, AWS RDS, AWS Elastic Load Balancer (ELB), AWS CloudWatch, AWS CloudTrail, AWS Elasticache (Redis), IAM, S3, Angular, Gradle

Client- Hikari Tsushin Inc, Tokyo, Japan

Aug 2014 - Jul 2015

Designation: Java Developer.

Description: Hikari Tsushin Inc (Hikari) is a technology company that offers office automation products. It offers services such as optical fiber line service, insurance services, customer services, and broadband lines services among others.

Roles & Responsibilities:

- Developing and maintaining Rest APIs for TM System, custom CRM (**Java, Oracle, Hibernate, Spring Boot, Struts, JEE, Spring MVC, Tomcat, RESTful API, JSP, SQL**).
- Worked as backend developer in Asset management system. (Java, J2EE, SQL, PL/SQL, Hibernate, Spring MVC, RESTful API)
- Used Spring AOP for logging request and response body through **log4j** of an API to debug the services.
- Used **Hibernate** as Object Relational Mapper(ORM) for saving the **Java** POJOs into **MySQL** database
- Used **SQL functions** and **triggers, PL/SQL** in **Oracle DB** main integrity of the data
- Used **Kafka** as message service for service-to-service asynchronous communication.
- Used **p6spy** to log database queries to help debug the service. p6spy internally uses the actual database driver
- Developed cross browser compatible **Responsive Web App** using HTML5, CSS3, JavaScript, JQuery, AngularJS,, Bootstrap. Tested the app using **Karma**
- Developed web-based applications using Client - Server architecture using **HTML5, CSS3, JavaScript, AJAX, ReactJS, Bootstrap, XML, XHTML, Java, Hibernate**.
- Developed single page web applications using **JavaScript,AJAX, jQuery ,ReactJS, Typescript, ECMA**
- Used **JWT** to secure Spring boot applications
- Configured and setup **Oracle** database to run and connect with the Spring boot and Spring MVC systems

Environment: Java, Oracle, Hibernate, Spring Boot, Struts, JEE, Spring MVC, Tomcat, RESTful API, JSP, J2EE, SQL, PL/SQL, Spring MVC, RESTful API, Kafka
