

Spencer Heywood
Web Developer
Ph: (971) 777-1485
LinkedIn: <https://www.linkedin.com/in/spencer-heywood/>
Email: contact@spencerheywood.com

PROFESSIONAL SUMMARY:

- Expert in **React** development, with extensive experience in building dynamic web applications.
- Proficient in using **Redux** for state management in complex **React** applications.
- Skilled in **JavaScript (ES6+)**, offering advanced knowledge in modern **JavaScript** features.
- Experienced with **HTML5** and **CSS3** for creating responsive and interactive web designs.
- Familiarity with **Node.js** for developing scalable server-side applications.
- Understanding of **Express.js** as a back-end web application framework for **Node.js**.
- Knowledgeable in **MongoDB** and **SQL databases** for effective data management.
- Competent in using **Git** and **GitHub** for version control and collaborative development.
- Experienced in integrating **RESTful APIs** and handling **JSON** data formats.
- Ability to optimize front-end performance using tools like **Webpack** and **Babel**.
- Knowledge of **Agile methodologies** and experience working in **Scrum teams**.
- Proficient in **AJAX** for asynchronous web applications.
- Familiar with **jQuery** for simplifying **JavaScript** code and handling **DOM** manipulations.
- Skilled in using **Bootstrap** for rapid and responsive **UI** development.
- Understanding of **test-driven development (TDD)** and **unit testing** frameworks.
- Experience with **CI/CD** pipelines for efficient and automated code deployments.
- Familiarity with cloud platforms like **AWS** or **Azure** for hosting and managing applications.
- Knowledge of containerization tools like **Docker** for application deployment.
- Understanding of **web security** best practices to ensure secure application development.
- Continuous learning and adaptation to new web technologies and frameworks.

TECHNICAL SKILLS:

Languages/Utilities	JavaScript, TypeScript, Ruby, HTML5, CSS3, Liquid, XML, JSON, Markdown
Front-End Technologies	React, Redux, Context API, React Router, Material-UI, Bootstrap, Tailwind CSS
State Management	Redux, MobX, Recoil
Build Tools	Webpack, Babel, npm, yarn
Testing Frameworks	Jest, React Testing Library, RSPEC, Mocha
Back-End Technologies	Node.js, Express.js, Ruby on Rails
Databases	MYSQL, MongoDB, PostgreSQL
Version Control Tools	Git, GitHub, GitLab
Development Practices	Agile Methodologies, Scrum, Kanban
DevOps Tools	Docker, Jenkins, Kubernetes, Certbot
Design Patterns	MVC, Singleton, Flux, Module

Web Services	REST, Nginx
Operating Systems	Windows, macOS, Linux/Unix, Ubuntu Server, Raspberry Pi
Cloud Technologies	AWS (S3), Google Cloud Platform, Heroku, Render

EDUCATION DETAILS:

Full-Stack Software Engineer Certificate - App Academy, NY – 2023

Coursework in Management Information Systems - Utah State University – 2019

PROJECTS:

Name: DashDoor

Description: Mobile Optimized DoorDash Clone

Roles & Responsibilities:

- Hand tailored over 20 **RESTful API** endpoints to optimize data transfer for the **HTTP** request/response cycle.
- Transformed application-wide data management through integration with **Redux** and **Thunk** middleware, achieving a centralized and highly accessible state management system.
- Elevated performance of a **PostgreSQL** database by using Rails' **Active Record** to eliminate redundant queries, and streamline backend processing through indexed lookups.
- Led the development of Dashdoor, a web application combining **Ruby on Rails** and **React**, tailored for efficient operation on constrained hardware.
- Configured **Nginx** on Raspberry Pi to optimize web server performance, enhancing content delivery and response times for Dashdoor.
- Integrated **Google Maps API** to offer advanced mapping and geolocation features, enriching user interaction and navigation.
- Implemented **SSL** encryption using **Certbot**, ensuring secure and trusted communications for Dashdoor users.
- Established a dynamic **DNS** service to maintain consistent access to Dashdoor, accommodating the variable IP environment of the Raspberry Pi.
- Designed interactive and user-centric **React** components, creating a seamless and engaging **user interface** for Dashdoor.
- Developed a robust continuous deployment pipeline, facilitating quick and efficient updates to the Dashdoor platform.
- Applied best practices in **Ruby on Rails** for a scalable and maintainable backend architecture.
- Optimized web application caching strategies, significantly improving Dashdoor's load times and performance.
- Instituted automated **SSL certificate** renewal processes, maintaining uninterrupted **HTTPS** encryption for Dashdoor.

Name: Home Keeper

Description: Home Service Provider Directory with Appointments

Roles & Responsibilities:

- Devised several custom **Google Maps** elements for user-friendly, interactive data visualization, ensuring team-wide secure **API key** storage to establish high standards of data security.
- Demonstrated a wide breadth of modern **CSS** techniques to provide a clean interface to a robust pool of data.

- Architected a Raspberry Pi-based home server with secure **Nginx** and **DNS** configurations, boasting a 1.2s site speed index and acting as a cost-effective **AWS S3** alternative.
- Directed the development of Home Keeper, a **MERN** stack-based home management application, focusing on ease of use and functionality.
- Developed the frontend using **React**, creating an engaging and responsive **user interface** for efficient home management.
- Implemented **Express.js** and **Node.js** in the backend for robust server-side operations and seamless data handling.
- Configured **MongoDB** for the project's database needs, ensuring flexible and scalable data storage solutions.
- Integrated **RESTful APIs** for fluid communication between frontend and backend components.
- Utilized **Redux** for efficient state management across the **React** application, ensuring consistency and performance.
- Applied responsive **web design** principles to ensure cross-platform compatibility and mobile responsiveness.
- Conducted thorough testing, including **unit and integration testing**, to guarantee a reliable and bug-free application.

Name: Nugget Rush

Description: Single-Page, Interactive Canvas Clicker

Roles & Responsibilities:

- Carefully adhered to an **Object-Oriented Programming (OOP)** methodology by building custom classes and inheritance chains in **Vanilla JavaScript** to enhance code organization and modularity.
- Crafted a mini-framework featuring a custom flag system, significantly boosting scalability and performance.

PROFESSIONAL EXPERIENCE:

Client: Servo LLC, UT

November 2021 - March 2023

Designation: Technical Product Manager

Description: Led the integration of multiple interdependent Shopify apps, significantly improving the functionality of a prototype platform by establishing sophisticated quoting, scheduling, and payment processes. Orchestrated strategic and technical initiatives for a diverse team of over 10 third-party engineers and designers, successfully guiding efforts that were crucial in securing the company's initial 50 customers.

Roles & Responsibilities:

- Managed Shopify storefronts, optimizing themes, and leveraging **Liquid templating** for customization.
- Oversaw the integration of Shopify apps to extend store functionality, focusing on payment, scheduling, and customer service enhancements.
- Implemented Shopify's analytics and reporting features to guide data-driven decision-making.
- Spearheaded **mobile optimization** for Shopify stores, ensuring compliance with Google's mobile-first indexing.
- Coordinated with **UX/UI** teams to implement responsive design across Shopify themes using **HTML5, CSS3, and JavaScript**.
- Led **A/B testing** initiatives on Shopify stores to maximize conversion rates and improve user engagement.
- Guided the development of custom **Shopify plugins** using **Ruby on Rails** to meet unique business requirements.
- Managed partnerships with payment gateways and implemented Shopify's Payment **SDK** for secure transactions.

- Implemented **SEO** best practices within Shopify to improve organic search rankings.
- Leveraged Shopify's **POS** system to create a unified online and in-store sales approach.
- Conducted workshops on utilizing Shopify's features, including discounts, gift cards, and store credits.
- Managed customer data in Shopify, ensuring GDPR compliance and secure data handling.
- Utilized Shopify's commerce capabilities to expand market reach.
- Integrated content management systems with Shopify, ensuring brand consistency across all channels.

Client: Ease Window Cleaning, UT

April 2019 - November 2021

Designation: Operations & Technology Manager

Description: Developed an online quoting algorithm that closely matched the precision of in-person methods. This innovation automated over 90% of the quoting process, and more than tripled online lead generation.

Roles & Responsibilities:

- Managed website operations on the Shopify platform, ensuring optimal performance and user experience.
- Implemented **Google Analytics** for detailed traffic and user behavior analysis, driving website optimization strategies.
- Coordinated with the development team to integrate user-focused apps, enhancing the online shopping experience.
- Leveraged **Google Ads** and Shopify's built-in **SEO** tools to increase website visibility and drive sales.
- Oversaw the adoption of **Google Cloud** technologies to scale website infrastructure during high-traffic events.
- Directed website security measures, incorporating best practices and tools to safeguard user data.
- Conducted continuous **A/B testing** using Google Optimize to refine user interface and conversion funnels on the Shopify store.
- Collaborated with **UX/UI** designers to ensure website accessibility standards were met, providing an inclusive customer journey.

Client: RedRockI.T.

January 2019 - April 2019

Designation: System Assembly & Technical Support

Description: Implemented efficient computer assembly protocols, achieving a 15% increase in production speed while maintaining zero compromise on system failure rates and strictly adhering to quality standards. Resolved a broad spectrum of hardware and software issues, restoring functionality or significantly boosting computer performance and system speed.

Roles & Responsibilities:

- Provided comprehensive technical support for a range of software and hardware issues, ensuring high levels of customer satisfaction.
- Utilized expertise in troubleshooting and problem-solving to efficiently resolve technical queries.
- Managed a helpdesk system, prioritizing and responding to support tickets in a timely and professional manner.
- Conducted regular system maintenance and updates, ensuring optimal performance and security.
- Developed and maintained detailed technical **documentation** and guides to assist users in resolving common issues independently.
